# Olle Marmenlind

marmenlind.com • Stockholm, Sweden • ollemarmenlind02@gmail.com • +46 72 426 37 99 • github.com/sojupie

Computer Engineering undergraduate. Builds backend infrastructure (PostgreSQL, distributed ingestion, ETL), embedded systems (RISC-V/FreeRTOS firmware), and runs product ownership end-to-end at Sevan AB since 2022.

## Education

**Royal Institute of Technology (KTH)** — Stockholm, Sweden
**B.Sc. in Computer Engineering** — **Expected June 2027**

- **Relevant Coursework:** Data Structures, Algorithms, Operating Systems, Microcontrollers (graduate level), Computer Networks, Databases, Information Security
- **Certifications:** CCNA, CCNP

## Experience

**Sevan AB** — Stockholm, Sweden (Remote)
**Technical Product Owner** — **March 2022 – Present**

- Promoted to Product Owner; scaled B2C content platform from 4.5K to 200K users and migrated 300+ B2B accounts to a digital e-commerce channel.
- Directed product roadmap and authored 400+ Jira tickets including API schemas and data models.
- Collaborated cross-functionally to translate business requirements into technical solutions and development priorities, coordinated development across external partner teams and vendors.

**Motillo AB** — Stockholm, Sweden
**Software Engineer (Client Project, KTH Industry Course)** — **March 2026 – June 2026**

- Built the React/TypeScript SPA (Entra ID auth) as a two-way control plane for UptimeRobot, managing tenant monitors, and for Litium order ingestion, built specifically to run continuously on legacy Chrome 76 kiosk devices.
- Implemented a simulated Lambda Architecture using PostgreSQL Materialized Views for historical rollups, merging them with live data to drop query times from 330ms to ∼20ms over 4 million rows.
- Set up an asynchronous ingestion buffer using Hangfire and Polly to handle upstream API rate limits and prevent frontend load delays.
- Wrote a C#/ASP.NET Core Web API extension for the Litium platform to extract, transform, and serve flattened Elasticsearch order data.

**Proximion AB** — Stockholm, Sweden
**R&D SWE Member (Selected University-Industry Project)** — **October 2025 – January 2026**

- Built a ∼$500 4-channel, 90Hz prototype that matched the performance of $10k+ industrial systems.
- Developed FreeRTOS/RISC-V firmware in C, using binary semaphores to synchronize high-priority ISRs with background data processing queues.
- Created a C#/.NET host application with a custom USB protocol for sub-ms sensor readout and visualization.
- Configured a self-hosted Linux CI/CD pipeline using hermetic Docker containers to enforce reproducible RISC-V builds, automated format patching, and release generation.

## Skills

- **Languages:** Java, C#, C, TypeScript, Kotlin
- **Systems & Infrastructure:** Linux, Docker, CI/CD, Azure, GCP, AWS, Microservices, Distributed Systems
- **Frameworks:** ASP.NET Core, Spring Boot, React, Vite, TanStack Router/Query
- **Data & Networking:** PostgreSQL, MySQL, Elasticsearch, MongoDB, REST, TCP/UDP, ETL/Data Pipelines
- **Tools:** Git, Bash, PowerShell, CMake, Jira, Agile
